

Where has Arizona’s charter school movement grown in the last decade? The Arizona Charter Schools Association examined average daily membership (ADM) through the lens of the geographical boundaries of school districts, highlighting districts that have seen large increases in the number of charter schools and students within their region¹. The first map shows the net gain in charter schools, the second map shows net gain in charter school ADM.

Net Gain in Charter Schools Within District Boundaries, FY06-FY15

Net Gain in Charter School ADM Within District Boundaries, FY06-FY15

ⁱ Schools that do not serve students in a typical fashion in a geographical location have been excluded. In the case of district schools, the Association used state ADM data gathered at the school and district level. In the case of charter schools, the Association gathered geographical information for all charter schools that are currently open, and assigned them to a geographical school district. For certain types of schools that do not have a geographical location listed with ADE, or whose ADM trends are outside the scope of this map, data were excluded (such as select online schools, JTEDs, accommodation/transportation schools and select BIA schools).
